## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election of Group I, claims 1-7 in the reply filed on March 14, 2008 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 8-14 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on March 14, 2008.

### *Claim Rejections - 35 USC § 112*

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:  

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
5. Claim 7 recites the limitation "said mixing chamber" in line 4. There is insufficient antecedent basis for this limitation in the claim. The Office suggests the Applicant to amend to, "said mixing container."

***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Young et al. (U.S. Patent No. 4,345,099).

Young discloses a method for dissolving urea comprising;

Providing a mixing container (7) depositing a predetermined amount of urea and a predetermined amount of water into said mixing container to yield a predetermined urea/water concentration (column 10, lines 18-45);

mixing said urea and said water to form a mixture (column 5, lines 59-61);

monitoring the temperature of the mixture (column 9, lines 20-25);

allowing the mixture to stand until the temperature of the mixture reaches a predetermined temperature (column 9, lines 50-68; column 10, lines 1-15; column 5, lines 1-5); and

thereafter, resuming mixing of the mixture until the urea completely dissolves in the water (column 5, lines 1-10; column 3, lines 50-55). More specifically, the conversion of biuret in the process attributes to the urea content (column 3, lines 50-55) and therefore also contributes to the complete dissolution of urea in the mixture. The addition of a base to the mixture allows for the conversion of biuret, wherein the base is

added to the mixture incrementally (column 5, lines 5-10), which teaches the limitations of allowing the mixture to stand and thereafter resuming mixing of the mixture. The mixture can also drop below the required levels wherein said levels must be adjusted in order to complete the conversion of biuret (column 4, lines 66-68), which also teaches the limitation of allowing the mixture to stand until the temperature reaches a predetermined temperature.

Regarding claim 2, Young also teaches that the predetermined urea/water concentration is about 50/50 wt/wt (column 5, lines 25-30). Concerning claim 3, Young continues to disclose that the predetermined amount of urea that is in the predetermined urea/water concentration does not exceed 50% of the total weight of the predetermined urea/water concentration (column 10, lines 18-45). With regard to claims 4-6, the reference continues to disclose maintaining the temperature of the mixture in the mixing container at the predetermined temperature of about 23°C (column 6, lines 65-68). Concerning claim 7, the limitations are met with respect to claims 1 and 2 above, and therefore the explanations to claims 1 and 2 are relied upon as necessary.
